

COMPANY & PRODUCT BRIEF

Curify Studio

Industrial-grade multimodal AI content engine & automation pipeline.

We turn foundation-model capability into **100% deterministic, production-grade** pipelines — across content generation, multilingual video, and enterprise document intelligence. Not a prompt wrapper; the deterministic layer that makes AI reliable in real business systems.

Deterministic

≥90% accuracy · ≥98% run-consistency

Traceable

100% source-cited · no fabrication

On-Premise

local desensitisation · data stays yours

— WHO WE ARE

An applied-AI company built by production operators

Curify AI builds the **deterministic production layer above foundation models** — founded by a senior AI architect and Silicon Valley serial builders. We don't ship a "blind-box" AI image toy; we turn probabilistic models into **reliable, traceable, enterprise-grade pipelines**.

01

The company

Production-grade multimodal & document-intelligence systems on foundation models: knowledge graph, structured taxonomy, RAG with source citation, and a low-code content pipeline.

02

Founder & AI lead

15+ yrs large-scale ML / recommender-systems architecture. Head of AI @ ByBit; core technical leadership at Microsoft, Twitter, Snap; Director of Data Science @ Kuaishou.

CREDENTIALS

Ph.D. in Statistics · author of *Building Recommender Systems Using LLMs* (Springer, 2025).

03

The team

Core engineers spanning computer vision, speech, and generative video, backed by scalable data-pipeline and enterprise-integration experience.

FROM

Columbia University · MIT · Purdue and other top schools.

— THE CORE ENGINE

Three integrated production pipelines

A next-generation automated content matrix that deeply integrates image, video, audio, multilingual translation, and enterprise document intelligence.

1

Visual production pipeline

Goodbye tedious prompt engineering. Template-constrained + intent-routed generation — from **structured data / long-tail keywords** to **thousands of high-quality visual assets** (infographics, posters, bilingual cards) in one click, with strict brand-DNA consistency.

2

Multilingual video localisation & generation

Deeply integrates ASR (speech recognition), precision machine translation, TTS (voice clone & dubbing) and lip-sync. Turn static text/images into slideshow video; seamless out-of-market localisation for short-drama and e-commerce streaming.

Enterprise document intelligence

RAG with **mandatory source citation**, structured extraction (value · unit · source · confidence; unfound = "not specified", never fabricated), knowledge management and contract/document review — **deterministic, traceable, on-premise**.

— THE DETERMINISTIC LAYER

From probabilistic AI to a production system

Curify sits above foundation models and adds the deterministic layer enterprise work requires — not a prompt wrapper, but an auditable production pipeline.

— CORE SOLUTIONS & USE CASES

Horizontal capability, packaged per buyer

Digital Publishing & EdTech — turn dry vocabulary lists and text into typographically-polished bilingual read-aloud cognitive cards and multimedia picture books, cutting production cycles by ~90%.

Growth & Marketing Agencies — escape the "human-scaling trap": batch-render a month of platform-native social posts and short-video assets from a single brief.

DTC & Programmatic SEO — lock product DNA, batch-generate hundreds of lifestyle scene images; auto-match original imagery to tens of thousands of long-tail pages to capture Google organic traffic.

Creators & Designers — plug-and-play viral visual templates for creators, parents, language learners and Etsy sellers — instant inspiration into digital assets.

Enterprise & Public Sector — document intelligence, knowledge management and tender/contract interpretation — production-grade, secure, on-premise.

— PARTNERSHIPS

Strategic partnerships

We build deep partnerships with industry leaders — AI architecture consulting, API access, and white-label deployment.

Domestic: digital publishers, cross-border DTC brands, content agencies, short-drama overseas distributors.

Overseas: SEO webmaster networks, localisation agencies, YouTube / social top creators, digital-asset distribution groups, and systems integrators.
