

COMPANY BRIEF & SOLUTION PROPOSAL

AI Tender Interpretation & Contract Review

A deterministic, traceable, on-premise document-intelligence platform for the power industry — turning probabilistic AI into production-grade tender and contract workflows.

Prepared for **Sieyuan Electric Co., Ltd.** · 2026

Deterministic

≥90% accuracy, ≥98% run-consistency

Traceable

100% source-cited, no fabrication

On-Premise

Local desensitization · MLPS L3

— COMPANY BRIEF

An applied-AI company built by production operators

Curify builds the deterministic layer above foundation models — the exact discipline (RAG, structured extraction, traceability, enterprise integration) this project requires.

01

The company

Curify AI builds production-grade multimodal & document-intelligence systems on top of foundation models: knowledge graph, structured taxonomy, RAG with source citation, and a low-code agent/Skill platform.

TRACK RECORD

Shipped LLM/RAG, localization, and generation pipelines across crawling, transcription, translation, TTS and synthesis.

02

Founder & AI lead — Jay Wang

16+ yrs AI/Data executive: Head of AI at ByBit; ex-Microsoft (Principal Applied Science Mgr), Snap, Twitter, Director of Data Science at Kuaishou.

CREDENTIALS

Ph.D. in Statistics · Stanford LEAD · author of “Building Recommender Systems Using LLMs” (Springer, 2025) · repeat RAG / enterprise-LLM speaker.

03

Engineering DNA

Founding AI engineers spanning computer vision, speech, and generative video, backed by scalable data-pipeline and enterprise-integration experience.

FIT

RAG-native, multilingual, evaluation-driven — a team that ships reliable AI into real business systems, not demos.

KEY POINT Deep RAG + LLM + enterprise data-systems expertise — precisely the stack that intelligent tender interpretation and contract review demand.

The bottleneck is production, not model capability

We have studied your requirements. The pain is turning probabilistic AI into reliable, traceable, secure output at scale — across two high-volume, high-risk workflows.

TENDER INTERPRETATION

400+ international tenders / year

- ~1,000 pages per tender; a senior engineer needs ~1 week just to classify, structure, extract and fill the Checklist.
- Device parameters are **scattered across chapters** — easy to miss, mis-copy, or confuse units.
- Multi-round **clarifications (Addenda)** overwrite the original; the valid version is hard to trace.
- Six languages (CN/EN/FR/ES/RU/PT); experience is **siloed** in inboxes and personal drives.

CONTRACT REVIEW

~7,800 domestic + ~2,200 overseas flows / year

- 100–200+ pages each; risk clauses (**back-to-back, uncapped penalty**) hide across sections.
- Multi-role, multi-round review misses the **negotiation golden window**.
- Red-line libraries and past cases **never become enterprise assets**.
- Sensitive data (parties, prices, accounts) makes ad-hoc AI use a **security risk**.

— OUR APPROACH

From probabilistic AI to a production system

Curify sits above foundation models and adds the deterministic layer enterprise document work requires — not a prompt wrapper, but an auditable production pipeline.

1

Knowledge graph & intent routing

Routes every request through a structured entity/intent taxonomy so the model receives the right context, standards, and constraints.

2

Template & rule engine

Encodes Checklist / TDS structures and contract point-check rules — output is constrained into producible, reviewable formats, not free-form drafts.

3

RAG with mandatory source citation

Every extracted value and risk finding is anchored to document, chapter and page; unfound parameters are marked “not specified” — never fabricated.

4

Six-language multimodal parsing

OCR + parsing for CN/EN/FR/ES/RU/PT, with bilingual key-clause alignment and unified Chinese-language conclusions.

5

Local desensitization & on-prem base

Sensitive entities are masked locally before any AI step; all data stays on your servers — security is built into the pipeline, not bolted on.

≥90%

Parameter / risk-clause accuracy

100%

Source-traceable outputs

≥98%

Repeat-run consistency

6

Languages, OCR + parsing

Intelligent Tender Interpretation

From import → parse → understand → response output, covering the full lifecycle for power-industry EPC tenders.

CAPABILITIES MAPPED TO YOUR REQUIREMENTS

- **Smart document parsing** — multi-format + OCR upload; auto-classifies technical / commercial / drawings / BOQ / clarifications and auto-folding.
- **Structured decomposition** — directory tree with page mapping and a unified multi-file joint catalog; fully transparent, human-correctable.
- **8-dimension extraction → Checklist / TDS** — auto-fills fields with unit, condition, source and confidence; unfound = “not specified”, no fabrication.
- **RFQ package generation** — auto-splits standardized inquiry folders by device type; one-click ZIP export to suppliers.
- **Clarification (Addendum) management** — clarification > original priority, conflict detection, field-overwrite sync, full version trace.
- **RAG Q&A + project workspace** — natural-language answers cited to doc/chapter/page; role permissions, isolation and immutable audit.

COMMITTED KPIS

≤ 30 min

Single tender (≤1,000 pp) → Checklist

≥ 90%

Key-parameter extraction accuracy

100%

Traceable to source

≥ 20 / ≥ 10

Concurrent users / parallel projects

≥ 70%

Engineer time reduced per tender

Intelligent Contract Review

Spanning negotiation, point-check, signing and entry — fast risk identification, role-differentiated review, and closed-loop control for domestic and overseas contracts.

CAPABILITIES MAPPED TO YOUR REQUIREMENTS

- **Ingest + OCR + version history** — multi-format & scanned PDF; clause-structure detection; BPM/CRM auto-push into storage.
- **Rule-library risk grading** — high / medium / low, each finding anchored to the clause with a revision suggestion; domestic point-check + overseas multi-role parallel, isolated rule sets.
- **Multi-language review** — CN/EN/FR/ES/RU/PT parse-translate-review; bilingual key-clause alignment; conclusions unified in Chinese.
- **Change diff & seal verification** — original-vs-revised add/delete/modify with risk impact; seal & signature authenticity comparison.
- **No-code rule maintenance** — legal & finance teams edit rules in natural language — no developer needed; versioned and role-scoped.
- **Structured report + writeback** — merged multi-role opinions, conflict detection, Word/PDF export and BPM/CRM structured writeback.

COMMITTED KPIS

≤ 20 min

Single contract (50 pp) full flow

≥ 90%

Key risk-clause coverage · red-line miss ≈ 0

≥ 30 / ≥ 200

Concurrent users / contracts per day

100%

Desensitization restore consistency

≥ 60%

Legal review time reduced

Security is built into the pipeline, not bolted on

The design principle your requirements demand: sensitive data never leaves your environment, and every inference step is governed and auditable.

LOCAL DESENSITIZATION GATEWAY

Masked before any AI step

- Sensitive entities (parties, unit prices, quantities, accounts, contacts) auto-masked at a **local gateway** before any inference.
- Consistent whole-document replacement ([COMPANY_1]); mapping table stored **locally only**, never transmitted.
- Electrical params (110kV / 50Hz / 500MVA) and IEC/GB standards are **whitelisted** — never masked.
- Cloud API, if used, receives **desensitized text chunks only** — never raw files or drawings; auto-restore locally.

ON-PREMISE & COMPLIANCE

All data on your servers

- Documents, results, vector store, rules and Q&A logs stored **on Sieyuan servers** — no third-party cloud.
- TLS 1.3 / AES-256; **RBAC + ABAC**; physical/logical project isolation; field-level permissions.
- **WORM immutable audit logs**, ≥360-day retention; DingTalk / SSO identity integration.
- Containerized private deployment; targets **ISO 27001 + MLPS Level 3 (等保三级)**.

Buy a capability platform, not a point tool

Both solutions share one AI base — delivered as full source code with a perpetual cluster license, extensible by configuration across your product lines.

01

One base, many product lines

The same platform powers tender interpretation and contract review today, and extends by config to transformers, GIS, breakers and sister companies — build once, reuse across lines.

ALIGNED TO YOUR GOAL

Directly supports your “build once, reuse across lines” strategy.

02

Model freedom, no lock-in

Unified access to ≥ 5 mainstream LLMs with seamless cloud-or-local switching, $\geq 99\%$ routing accuracy and automatic failover.

FUTURE-PROOF

A cheaper/stronger model on the market can be onboarded fast — no business-code change.

03

Low-code agents & SKILL system

Visual drag-and-drop agent/workflow orchestration, ≥ 30 built-in Skills, ≥ 5 templates; business users maintain rules with no code.

KNOWLEDGE ASSETS

Turns scattered expert experience into reusable enterprise assets and faster onboarding.

KEY POINT Full source code + perpetual cluster license = long-term self-sufficiency and no vendor lock-in.

A milestone-driven plan to go-live in 2026

Staged delivery and acceptance, with full source-code handover, ≥1-year warranty, and 3 months of on-site support after go-live.

MILESTONE	DELIVERABLE	PROOF OF ACCEPTANCE
M1 · Design	Requirements spec + detailed design signed off	Confirmed scope & architecture
M2 · Base ready	Private AI platform, LLM inference chain, DB & vector store	Environment stood up on-prem
M3 · Core build	Both systems built, vendor self-test passed	Feature-complete, self-tested
M4 · Integration	DingTalk / BPM / CRM interfaces jointly debugged	End-to-end integration report
M5 · UAT	Real data: ≥10 tenders, ≥30 contracts	Signed UAT confirmation
M6–M7 · Go-live	Production cutover, on-site support, final handover	Acceptance sign-off + KPI stability

KEY POINT

We commit to the acceptance KPIs — ≤30 min / tender, ≤20 min / contract, ≥90% accuracy, 100% traceability, ≥98% consistency — verified on your real data.

— WHY CURIFY

Deterministic, traceable, secure by design

RAG-native leadership

Founder-authored book and repeated conference talks on Retrieval-Augmented Generation and enterprise LLMs — depth few vendors can match on the exact technology this project runs on.

Production DNA

Traceability, no-hallucination discipline, and rule governance are built into the pipeline — the difference between an impressive demo and a system your engineers can trust.

True on-prem & data security

Local desensitization gateway, all-local storage, RBAC+ABAC and MLPS-L3 posture — designed for exactly your sensitivity and compliance requirements.

Reusable platform, no lock-in

Full source code, perpetual license, low-code maintenance and cross-product-line reuse — you own a durable capability, not a dependency.

KEY POINT Let's build Sieyuan's group-level intelligent bidding & contract platform — deterministic, traceable, and secure. · Jay Wang · team@curify-ai.com
